

FLOAT MXR SHOCK SETUP SUPPLEMENT

KAWASAKI® KLX110/SUZUKI® DRZ110 APPLICATIONS

The items noted in this supplement are exceptions to the included **FOX® FLOAT MXR** owner's manual when utilizing the MXR on a Kawasaki KLX110 or Suzuki DRZ110 motorcycle.

The basic setup, maintenance, and adjustment for the **FLOAT MXR** is as noted in the included owner's manual.

- 1 2 Basic shock orientation on the bike.
- 3 4 In some cases, a small U-shaped relief may be required to properly access the Schrader valve on the **FLOAT MXR** shock with the supplied shock pump. The relief can be easily added using a file or equivalent. The figures illustrate the small amount of swingarm material removal required.
- 5 The **FLOAT MXR** is mounted with the rebound knob pointed up and mounted at the swingarm end of the bike.
- 6 The upper and lower reducers are the same dimensions for the KLX/DRZ 110 application.
No washers are needed and are not included in the mounting kit.
O-rings and mount orientation remain the same (as shown in figure 6).
